Dental Map

FOR OUR DESIGN TEAM · V3.0

Design Asset Brief.

Every visual we'd love your help with — icons, illustrations, photography direction, marketing visuals, email design, and pilot collateral. **Open the reference link on each card before starting that asset** — every link is hand-picked to anchor what that piece should feel like.

PROJECT	DATE	CATEGORIES	LIVE BRIEF
Dental Map	2026-04-28	8 (A–H)	/design-brief

Brand foundation.

The brand colors, type, and tone already locked into the product. Treat this as the floor — every asset you make should feel native to it. Refine, don't break.

Palette — teal (primary)

teal-50	teal-100	teal-200	teal-300	teal-400	★ 500	teal-600	teal-700	teal-800	teal-900
#E7F7F4	#C6EDE6	#9DDFD3	#6FD0BD	#3FBFA6	#1EA58F	#128074	#0E6458	#0B4B42	#08332D

★ teal-500 = primary brand value (CTAs, focus rings, map pins, verified ticks).

Palette — ink + accents

ink-50	ink-300	ink-500	ink-700	★ 900	surface	coral-100	coral-500	coral-600	white
#F6F8FA	#A1ABB8	#475568	#1F2A3C	#0F1B2A	#F6FAFA	#FDE4DB	#F2704E	#D65735	#FFFFFF

Coral used *sparingly* for "offer / new" badges only. Never as primary CTA.

Type stack

FAMILY	USE	WEIGHTS	GET IT
Plus Jakarta Sans	Display — H1/H2, dentist names, dashboard titles. Letter-spacing −0.03em on ≥28pt.	700, 800	↗ Google Fonts
Manrope	Body & UI text. Line-height 1.55–1.7.	300–700	↗ Google Fonts
Cairo	All Arabic. Line-height 1.7. Never letter-space.	400–800	↗ Google Fonts
JetBrains Mono	IDs, timestamps, slot codes. Sparingly.	400, 500	↗ Google Fonts

Personality (3 rails)

Confident

We replace phone tag with a real booking. No hedging copy.

Calmly clinical

Adjacent to healthcare without being cold. Generous whitespace, low-saturation color, soft shadows.

Respectfully Egyptian

Arabic-first. No Pyramids/Sphinx clichés. No "ancient" anything.

How to use this brief. Each asset card lists 3–5 reference URLs. Click them — they're hand-picked to anchor the visual direction. "Feel like Linear" means what you see when you click linear.app, not what you imagine. Please open every reference before you start that piece.

Stylistic guardrails

What to **avoid**:

REFS · OPEN BEFORE STARTING

↗ Vezeeta look — too "medical blue"

↗ undraw — too generic

↗ blob.style gradients — overused

What to **aim for**:

REFS · OPEN BEFORE STARTING

↗ Linear — restraint

↗ Stripe — clarity

↗ Practo — regional clinical

↗ Vercel — depth

Link previews.

Most of our pilot distribution will happen in Cairo dentist **WhatsApp groups**, where link previews render as a centre-square crop at ~300px. Design for the thumbnail; the full size is a courtesy.

A.1 Default OG image (homepage)

What appears when the homepage is shared on social or pasted in WhatsApp. Today there's nothing branded — just a screenshot — which is illegible at thumbnail size.

SIZE	1200×630 · safe-zone 1080×566 (10% padding around edges)
LOCALES	Two versions — Arabic (RTL) and English
WEIGHT	≤300KB · PNG · fonts outlined to paths

REFS · OPEN BEFORE STARTING ↗ OpenGraph.xyz preview ↗ Vercel OG playground ↗ Linear changelog OGs ↗ Vercel blog OGs

A.2 Per-page OG templates (3)

Don't hand-design each one — provide a Figma master per template that we render dynamically with each page's data. Three templates we need:

TEMPLATE	VARIABLES	USED WHEN
Search results	specialty, area, count, locale	Someone shares a filtered search ("dentists in Heliopolis under 500 EGP")
Dentist profile	name, title, specialty, fee, area, locale	A patient sends a friend a link to a specific dentist (highest-shared link)
For clinics	—	A dentist forwards the pilot invite to their peers

A.3 WhatsApp + Twitter previews

Same 1200×630 source as A.1/A.2. WhatsApp centre-square crops to ~300px; Twitter crops 1.91:1. **Verify each design in a real WhatsApp message before sign-off** — that's the actual distribution channel.

DO

- Set the headline at ≥64pt — must read at 300px
- Keep critical content centred
- Bake fonts to outlines

DON'T

- Don't put text in the outer 10% (gets cropped)
- Don't use photography (kills at thumbnail)
- Don't mix Arabic + English in one image

Empty / success / error / onboarding.

Nine illustrations, one system. A flat default looks broken; a thoughtful illustration looks like care. One Figma file, four colors max plus an optional coral accent moment.

B.0 Illustration system rules

Style	Geometric / semi-flat. Depth via offset shape, never gradients or shading.
Palette	teal-500, teal-100, ink-900 (line), white. Optional single coral-500 accent moment.
Stroke	1.5px at 24×24 baseline · round caps + joins · no mixing fat & thin.
People	Avoid faces. If unavoidable: silhouettes, brown-skinned defaults to fit the Egyptian audience.
Backgrounds	Transparent. Surface tinting happens in the surrounding panel.
Sizing	Designed at 320×240 viewBox. Empty states render at 192px wide; onboarding at 320px.

REFS · OPEN BEFORE STARTING

- ↗ Linear empty inboxes
- ↗ Stripe docs illustrations
- ↗ Doola — restrained geometry
- ↗ IconScout illustrations
- ↗ Avoid undraw
- ↗ Avoid blush.design

ID	ASSET	WHERE IT APPEARS	CONCEPT
B.1	No search results	Patient search results page when filters return nothing	Magnifying-glass over an empty map
B.2	No bookings yet	Dentist dashboard, the bookings list, before any patient has booked	Empty calendar + soft notification dot. Anticipation, not absence.
B.3	No calendar connected	Dentist dashboard, the calendar-connection card before they link Google Calendar	Two calendars + a teal arc connecting them
B.4	No clinics on map	The patient map view when no clinic in the current search has coordinates	Cairo silhouette with no pins (Nile + abstract skyline)
B.5	Booking confirmed	The success screen patients see after submitting a booking	Appointment card + teal tick. Quiet relief — no confetti.
B.6	Calendar synced	The connected state of the GCal card on the dentist dashboard	Two calendars locked together. Pair visually with B.3.
B.7	Dentist onboarding (3 panels)	First-time dentist's dashboard — a 3-step inline tour	Welcome → set working hours → connect calendar. **Sunday-first week** (Egyptian).
B.8	Calendar sync tutorial (3 panels)	Inline help next to the "Connect Calendar" button	Read free/busy → compute open slots → booking lands back in calendar
B.9	Errors (404, 500, slot-taken)	404 page, generic error, "this slot was just taken" message	Map with torn corner / clipboard + wrench / greyed-out slot card

Custom icons + map pin + trust badges.

We use ↗ Lucide for generic UI icons (chevrons, copy, share). Anything dental-specific is custom and needs to slot in next to Lucide visually — same grid, same stroke, same outline-only style.

C.0 Icon system rules

24×24 viewBox · 1.5px stroke · round caps/joins · single colour from the parent (so they recolor automatically) · outline-only — no filled.

REFS · OPEN BEFORE STARTING ↗ Lucide — the system to match ↗ Phosphor ↗ Heroicons ↗ Tabler ↗ Iconoir

C.1 Specialty icons (7)

Used on the homepage specialty grid, search filter chips, and dentist-card specialty rows. **Locked list — only these seven.**

ICON	CONCEPT	EN / AR LABEL
Adult dentistry	A clean adult tooth	Adult / أسنان البالغين
Pediatric	Smaller tooth + soft side cue (no cartoon faces)	Pediatric / أسنان الأطفال
Orthodontics	Tooth with a bracket / wire	Orthodontics / تقويم الأسنان
Cosmetic	Tooth + sparkle / shine glyph	Cosmetic / تجميل الأسنان
Endodontics	Tooth in cross-section, simplified canal	Endodontics / علاج الجذور
Implants	Tooth with screw-post (abstract)	Implants / زراعة الأسنان
Oral surgery	Tooth + abstracted tool. **No syringes.**	Oral surgery / جراحة الفم

Tone: these reduce anxiety, not increase it. No blood, no instruments mid-action, no exposed nerves.

C.2 Service icons (8)

More granular than C.1 — they appear on each dentist's profile next to the services they offer. The eight: cleaning · whitening · fillings · root canal · extraction · braces · implants · x-ray.

C.3 Brand-specific icons

Where Lucide isn't enough — match its grid + stroke exactly so they sit clean alongside.

ICON	WHERE IT APPEARS
WhatsApp (brand)	The "WhatsApp" action button on each booking row · contact CTAs · clinic stickers
Google Calendar	The "Connect Calendar" button · dentist dashboard nav · sales-kit step diagrams
Dentolize	For-clinics page · onboarding slides · sales kit (coordinate use rights with Dentolize)

C.4 Custom map pin (highest visibility)

The pin used to mark each clinic on the patient-side map — replacing the placeholder pin we use today. Single highest-visibility asset on the patient surface (every search paints multiple of these).

SIZE	36×48 anchored at the bottom-centre point
STATES	Default (teal-500) · Hover (1.15× scale, lighter teal ring) · Active (filled teal-700, white tooth glyph)
CONTAINS	A tooth glyph inside the pin — that's the brand cue

REFS · OPEN BEFORE STARTING ↗ Airbnb pins (semantic content inside) ↗ Mapbox pin reference ↗ Leaflet custom icons

C.5 Trust badges (7)

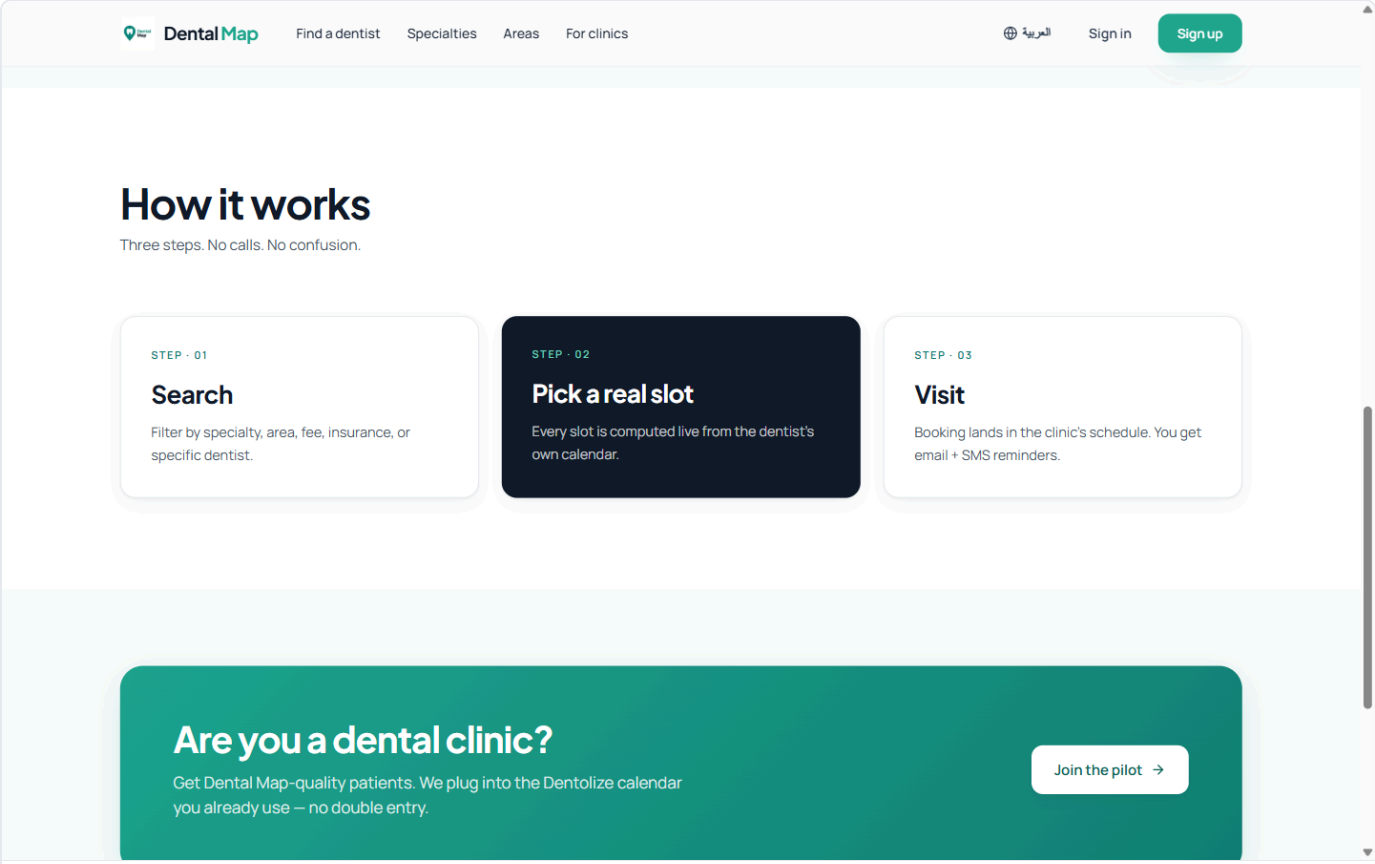
Each badge: a 24×24 icon AND an 80×24 pill version (icon + label, Plus Jakarta 10pt 600). Appear on dentist cards, profile pages, and search filter chips.

BADGE	EARNED WHEN	COLOR TREATMENT
Verified	Default for every pilot clinic	Teal-500 fill, white check
Top-rated	≥4.7 average from ≥10 reviews (post-pilot)	Coral-500, white star
On-time	≥90% appointments started within 15 min	Ink-700 outline + clock
Female dentist available	≥1 female dentist in clinic	Teal-100 fill, ink-700 silhouette
Kids-friendly	Pediatric specialty + clinic-confirmed	Teal-100, small-figure cue
Accessible	Wheelchair access, no stairs	Teal-100, wheelchair glyph
Female-only hours	Specific working blocks women-only	Coral-100, modest silhouette

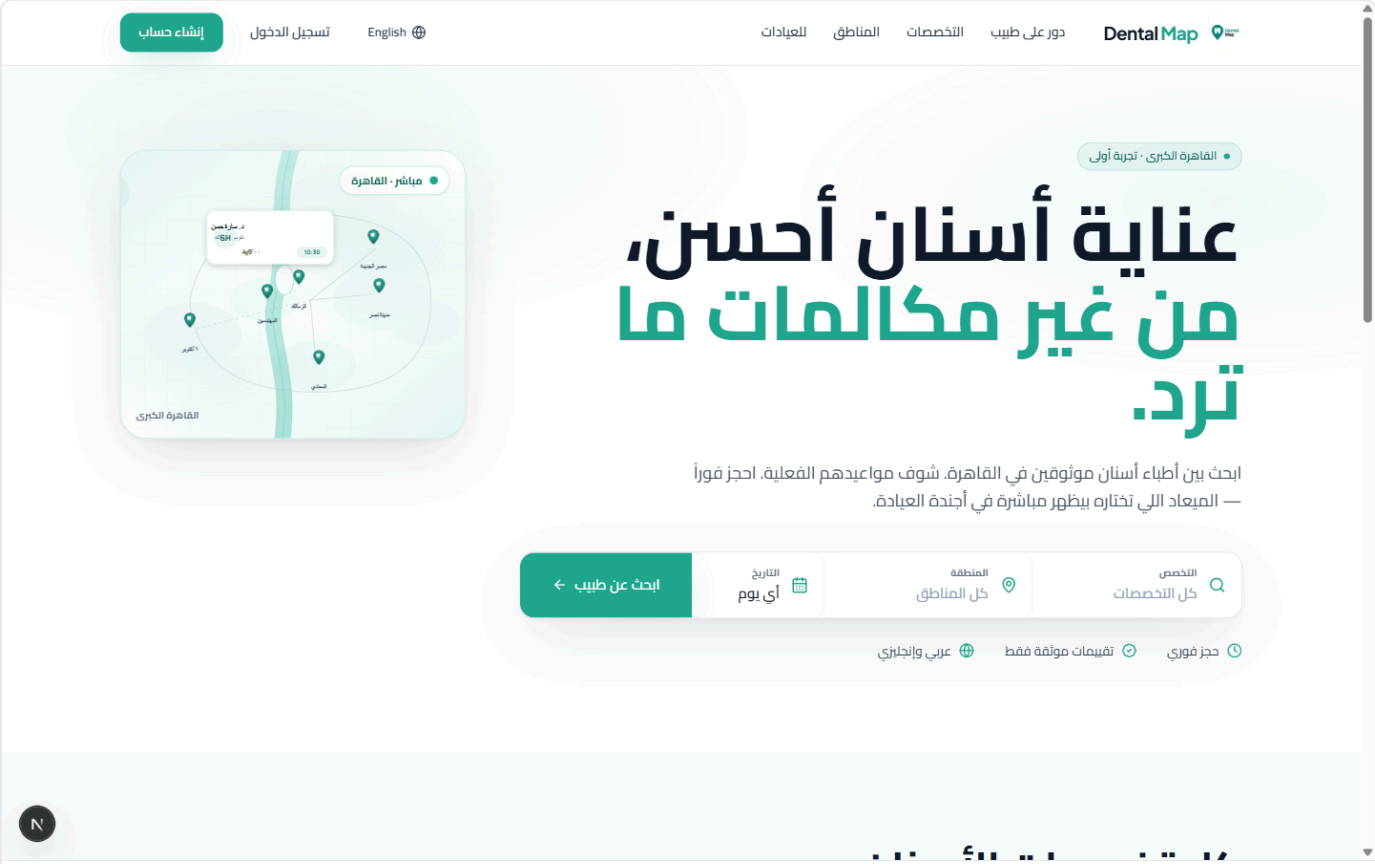
Cultural specificity: the female-availability badges reflect a real Cairo need — please make the silhouettes respectful and modest. No veil clichés, no stereotyped depictions.

Hero, portraits, clinic interiors.

Three jobs: refine the existing hero, set portrait standards for ~50 pilot dentists (most will use phone shots), and set the clinic-interior standard. Plus a mood board that lives on WhatsApp.



Current homepage — English



Current homepage — Arabic, RTL

D.1 Refined hero (4 deliverables)

The current hero ships as three baked PNGs done quickly to launch the brief. It's now the most-viewed surface and needs to graduate.

SIZES	EN desktop 1920×900 · EN mobile 750×1100 · AR desktop 1920×900 (RTL) · AR mobile 750×1100 (RTL)
FORMAT	WebP ≤120KB + PNG fallback
COMPOSITION	Keep the soft teal radial wash. Add a subtle, abstract Cairo-skyline silhouette behind the search bar (low opacity). Optional: a tilted dentist-card preview on desktop. RTL = full relayout, not just a flip.

REFS · OPEN BEFORE STARTING

- ↗ Linear hero
- ↗ Practo hero
- ↗ Doctolib hero
- ↗ Land-book health gallery
- ↗ SaasPages

DO

- Layer 2–3 radial gradients for depth
- Hold to the existing copy on the live homepage
- Build in Figma — easy to iterate

DON'T

- Don't use stock dentist photography
- Don't include Pyramids / Sphinx / palms
- Don't use a single flat radial

D.2 Dentist portraits — phone-shot guide + placeholder

~50 dentists, no per-clinic photographer. The deliverable is a 1-page guide a clinic admin can read on WhatsApp + a "good shot vs bad shot" comparison sheet. Plus an avatar placeholder that's used when no photo has been provided.

Frame	Head + shoulders, vertical 3:4, eyes upper-third
Background	Clinic wall (teal-tinted ideal) or solid white
Lighting	Window or even fluorescent. No flash.
Wardrobe	White coat / scrubs OK. No patterned shirts.
Phone	Rear camera, no zoom, original-quality WhatsApp

REFS · OPEN BEFORE STARTING ↗ Doctolib portraits ↗ Zocdoc portraits ↗ Unsplash dentist (style only — don't use stock)

D.3 Clinic interior — guide + placeholder

Same logic as D.2 — short guide for the clinic admin, plus a flat illustrated placeholder when no photo exists.

Frame: 16:9 horizontal, dental chair as central subject, depth cues (cabinetry, second chair). Ambient overhead light, no operatory light on. **No people in shot** — patients feel safer when the room looks ready, not occupied. Visible cleanliness cues (sealed instrument trays, clean counter) but not staged.

Placeholder: a dental chair illustration in the brand teal palette — flat, geometric, calm. 480×270.

D.4 Mood board — single page

A Figma page with 12 reference shots — six "yes" and six "no", each with a 2-word caption ("calm lighting" / "stock smile"). Browsable in 60 seconds on a phone — that's what gets shared with each pilot clinic on WhatsApp.

REFS · OPEN BEFORE STARTING ↗ Behance — dental clinic projects ↗ Dribbble — dental ↗ Pinterest — clinical photography

Branded transactional headers.

Five PNG headers + a footer that survive Gmail, iOS Mail, Outlook, and the WhatsApp in-chat preview. Today our emails ship plain, no header, no branding.

E.0 Email constraints (read first)

Format	PNG only. No SVG, no live CSS gradients in the header.
Width	600px max — beyond that Gmail force-scrolls
Height	120–160px for customer headers · 90px for "internal" alerts
Retina	Render at 1200×320, deliver at 600×160. Browsers downscale cleanly.
Dark mode	Survive iOS auto-invert: dark-on-teal, never white-on-light-teal
Locale	Two PNGs per header — Arabic + English. Never mix scripts in one image.

REFS · OPEN BEFORE STARTING ↗ Really Good Emails (gallery) ↗ RGE — transactional ↗ Litmus — testing tool ↗ Email on Acid

ID	HEADER	WHEN SENT	TONE
E.1	Patient confirmation	After a patient confirms a booking	Customer comm — teal gradient, lockup centred, soft texture
E.2	Clinic notification	To the clinic when a new booking arrives	Internal alert — slimmer (90px), ink-700 background, "New booking" pill
E.3	24h reminder	To patient, 24h before the appointment	Anticipation — light tone, "Tomorrow at the clinic"
E.4	Dentist welcome	After a dentist signs up	Friendly — refrain of the B.7 welcome illustration as PNG
E.5	Universal footer	On every transactional email	Wordmark · 1-line tagline · social icons · unsubscribe · address

Test before sign-off: render every header in Gmail desktop, Gmail Android, iOS Mail (light + dark), Outlook 365, and the WhatsApp in-chat preview. Litmus screenshots in the handoff.

Home + for-clinics + content.

The home page beyond the hero, plus the dentist-acquisition surface — which is the highest-leverage marketing surface in the project. A dentist sharing this URL in a WhatsApp group converts other dentists.

F.1 "How it works" — 3-step illustrations

The three-step section below the hero on the homepage ("Three steps. No calls. No confusion."). Each illustration ~280×200, follows the same illustration system as §B so they sit consistent next to in-app states.

STEP	CONCEPT
1. Search	Search bar over a Cairo silhouette, pins lighting up below
2. Pick a real slot	Slot grid with one slot pulsing teal mid-pick
3. Visit	Clinic card morphing into a calendar event

F.2 Feature-section icons (3)

Three small icons in the trust strip below the hero: **instant booking** (lightning + calendar fusion), **verified reviews** (review card with teal verified tick), **bilingual** ("ع" + "A" pairing, brand teal accent on one).

F.3 "For clinics" value-prop graphics

Three visual moments on the For Clinics page (the dentist-acquisition surface):

1. **"Bookings land in your calendar" diagram** — Dental Map → Google Calendar → Dentolize. Three boxes, two arrows, brand teal. Must read at 320px on a phone (it'll be screenshotted into WhatsApp).
2. **"No double entry" comparison** — Vezeeta-style lead queue (greyed-out) vs Dental Map (teal). One image shows the differentiator.
3. **"Free during pilot" CTA banner** — coral-500 accent (the one moment we use coral on marketing).

REFS · OPEN BEFORE STARTING ↗ Linear marketing ↗ Stripe Atlas ↗ Land-book ↗ SaasPages ↗ Page Flows ↗ Mobbin (mobile UI)

F.4 Testimonial avatar style

Post-pilot, when we have real testimonials. Style: rounded-full, 1px teal-200 border, 56×56. When no photo provided: an abstract geometric profile silhouette in teal-100 / ink-700 — same aesthetic as the dentist avatar fallback.

Pitch one-pager, deck, business card.

Things we hand a Cairo dentist in person, on WhatsApp, or on Zoom when convincing them to be one of the 20–50 pilot clinics.

G.1 Clinic pitch one-pager

FORMAT	A4 (210×297mm) · 4mm bleed · 12mm safe-zone · CMYK · print-ready PDF
LOCALES	Arabic (RTL, primary for Cairo) and English
FILLED HOW	One template — clinic-specific overprint zone for the clinic's name + photo. Rendered per-clinic.

Required content blocks: Header band · One-line pitch ("Bookings that land in your calendar.") · 3 differentiators · The F.3.1 "how it works" diagram · 3 commitments asked / 3 things we provide · Footer (contact + signup QR).

REFS · OPEN BEFORE STARTING ↗ Figma Community templates ↗ Issuu (one-pager refs) ↗ Dribbble — one-pagers

G.2 Demo deck (15 slides)

FORMAT	16:9 (1920×1080) · Figma + Google Slides + PDF · Arabic / English variants
OUTLINE	Cover · Problem · Patient pain · Clinic pain · Thesis · Demo (search/book/dashboard) · Calendar-sync flow · Pilot scope · Asks · Provides · Timeline · Pricing (post-pilot) · Q&A

Each slide: title (Jakarta 36pt) · one-liner (Manrope 18pt) · one visual (illustration / screenshot / diagram). **No bullet-soup slides.** The deck is read in 60 seconds (skim) or 20 minutes (with talk-track).

REFS · OPEN BEFORE STARTING ↗ Pitch templates ↗ Slidesgo ↗ Beautiful.ai ↗ Notion deck templates

G.3 Business card

85×55mm · 0.4mm corner radius · 350gsm soft-touch coated. Front: full lockup centred on teal-700. Back: name, title, phone (with WhatsApp QR), email, signup URL — white on ink-900.

REFS · OPEN BEFORE STARTING ↗ MOO ↗ Dribbble — business cards

In-clinic, patient-facing.

The patient walks past reception, sees the sticker on the window, and Dental Map becomes real. Three small print pieces — clinic-side, patient-facing.

H.1 QR sticker (window decal)

120mm circle decal, vinyl, transparent backing — sticks inside the window, reads from outside. Bilingual layout (Arabic + English stacked, or two separate stickers).

Composition: icon-only mark at top, "Book on Dental Map" / "احجز على دنتال ماب" caption, QR code centred (links to the clinic's profile). Brand teal background, white type. Print-ready CMYK with 3mm bleed + a digital PNG version for clinics that prefer to print at a local shop.

H.2 Reception A5 flyer

A5 (148×210mm) · double-sided · 250gsm matte coated.

Front: Headline ("Book your next appointment in 30 seconds." / Arabic equivalent), brand teal hero with the F.3.1 diagram, QR code bottom-third, clinic-specific overprint zone (name + dentist photo) at top.
Back: The §F.1 three steps, smaller. Footer: clinic address + Dental Map URL.

H.3 Tri-fold table tent

100×210mm folded · 350gsm soft-touch. Each panel = one of the §F.1 three steps. QR on the last panel. Lives on the receptionist's counter — patient picks it up while waiting and books their *next* appointment before this one ends.

REFS · OPEN BEFORE STARTING ↗ MOO ↗ Vistaprint ↗ Dribbble — print collateral

Print partner: please suggest 1–3 vetted Cairo printshops. Quantities are small per clinic (50–100 pcs); lead time matters more than absolute lowest price.

RTL, phasing, sign-off.

Arabic / RTL — what mirrors and what doesn't

Half our users will see the Arabic, RTL version of every screen. Most things mirror; a handful never do.

ELEMENT	MIRROR IN RTL?
Layout / column order	Yes
Wordmark "Dental Map"	**No** — Latin script, never flipped
Right-pointing arrows / chevrons	Yes
Calendar grid	No — Sunday-first either way (Egyptian week)
Numerals	No — use Western Arabic 0–9, not eastern ٠١٢٣
Map UI / photography	No (geographic, not lingual)

Phasing against the 5–6 week pilot

Pilot launch is targeted ~6 weeks from project start (early June 2026). Not every asset is launch-blocking — three phases below.

PHASE	WHEN	WHAT WE NEED
PHASE 1 — LAUNCH	Now → 3 weeks	Default OG (A.1) · the first six UI illustrations covering empty + success states (B.1–B.6) · the custom map pin (C.4) · "Verified" trust badge (C.5) · patient-confirmation email header (E.1) · email footer (E.5)
PHASE 2 — ONBOARDING	3 → 6 weeks	Per-page OG templates (A.2) · onboarding illustrations (B.7–B.8) · all specialty + service icons (C.1, C.2) · refined hero (D.1) · photo guides (D.2, D.3) · all other email headers (E.2–E.4) · marketing visuals (F.1, F.2) · sales kit (G.1, G.2)
PHASE 3 — POST-PILOT	Week 6+	Error illustrations (B.9) · the rest of the trust badges (C.5) · for-clinics value-prop graphics (F.3) · testimonial avatars (F.4) · business card (G.3) · all print collateral (H.1–H.3)

Review process

Two rounds per category. We'd rather catch issues at low fidelity than polish the wrong thing.

1. **Round 1 — concept.** Sketches, wireframes, mood. We confirm direction. ≤3 days turnaround.
2. **Round 2 — production.** Final files, organized in a Figma library. Engineering integrates.

Sign-off: a founder confirms each piece is on-brand and tonally right. If something needs significant rework, we go back to a Round 1.5 — we don't pile-up corrections on production files.

> **One last thing.** This brief is opinionated on purpose — the aim is to remove blockers, not to over-direct. Push back where we've over-specified. We'd much rather get one strong design opinion than a cautious execution of ours.

v3.0 · 2026-04-28 · /design-brief
